

Morning meeting 12.12.2024

Attendance: Daníela, Hreimur, Jón, Kormákur, Tumi, Yeabsira

Time: 12:00

Today in the meeting we discussed some final steps. Everything surrounding the project was going well so we did not discuss a lot too specifically. The main thing we wanted to do was to make sure there are no problems in the code making the program crash. After the program is running perfectly fine we are planning to add some colors to the UI and making sure the document is up to date. We plan on finishing the code today and using all of the day tomorrow to create the video and make some finishing touches.

On the priority list the most important task of the day is to make sure the program runs smoothly and is ready for any inputs without crashing.

In the middle of the priority list is improving our document making sure everything is up to date. If it is not finished today we will have the final program tomorrow making it easier to be certain about the look and feel.

On the bottom of our list is to create the video showing the project because we would like to have everything ready looking good before trying to make the video.
