

Morning meeting 11.12.2024

Time: 12:00

Attendance: Daníela, Hreimur, Jón, Kormákur, Tumi, Yeabsira

Today we are going to be continuing to work on the functions that were not finished off the list yesterday. Yesterday and earlier today we managed to finish all of the A Requirements and all except 2 from the B Requirement list. Along the way we found some smaller issues with the properties menu where the program crashes if the input does not exist and also an issue with looking for maintenance reports on a property. Today we will be fixing that and trying to at least finish the B requirements we needed. We will also be fixing the wireframes and our document.

Our main goal is to finish all of the programming today so we could use the entire day tomorrow to finish the document we will be turning in and the video about the program. If we manage to do that then we could have Friday as a backup day to fix all minor issues and add little changes instead of using all the day trying to implement some things that might not work.

Our highest priority is

Fix issues with property menu and finish the last B Requirement.

The medium priority is

Further improve the document and wireframes.

And the lowest priority is to add certain C Requirements that might be hard to implement in this time.
